*The Journal of* **Continuing Education in the Health Professions**

**Volume 30, 2010**

## Subject Index

ABMS Maintenance of Certification (MOC) program, 187, 188, 191
Academic detailing, 140–141*t*
Accreditation Council for Continuing Medical Education (ACCME) [U.S.], 3, 7
Accreditation Council for Graduate Medical Education (ACGME), 197, 208
ACGME-accredited residency programs (U.S.), 91
Aging: cognitive performance decrements due to, 153–154; CPEP Reentry Program rating by participant, 184*t*; examining cognitive performance of physicians and, 154–159; increasing age of U.S. population, 153; plasticity and, 156; situated cognition theory on, 154*fig*–155
Aging physicians: deliberate practice (expertise) of, 156; implications and future research on, 157–159; information professing theory and, 155–157; lessons for practice, 159; neurobiology of, 156–157; self-directed and self-regulated learning by, 157; situated cognition theory on, 154*fig*–155
*Al Bayan* newspaper, 252
Albany Medical College (U.S.), 161
Alliance for Continuing Medical Education, 77
AMA Council on Medical Education, 181
AMA's Code of Physician Conduct, 209
American Academy of Family Physicians, 225
American Academy of Pediatrics (AAP), 181
American Association of Medical Colleges (AAMC), 197
American Board of Medical Specialties (ABMS), 106, 187, 188
American Medical Association (AMA), 180, 181, 208, 209
Anesthesia crisis resource management (ACRM), 213–214
Antibiotics: Iranian CME study on prescriptions of, 13–17; outcomes and assessment indicators for prescribing, 13*t*; prescription-related outcome indicators for prescribed, 15*t*
ASEAN countries, 145
Assessment: of barriers to changing practice following CME, 237–244; construct validity study for clinical competence, 19–24; CPEP Reentry Program rating by participant age, 184*t*; international programs and providers of, 29*t*–30*t*; learning portfolio models study on learning and, 60, 62; perceptions of physicians about industry relationships, 197–203; physician performance problems, 26–36; teamwork competencies, 216–217. *See also* Evaluation
Assessment instruments: clinical evaluation exercises (CEX and mini-CEX), 20; ITERs (in-training evaluation reports), 20; JSPE (Jefferson Scale of Physician Empathy), 205; JSPPPE (Jefferson Scale of Patient's Perception of Physician Empathy), 205; PAR (Physician Achievement Review), 20; programs/methods for assessing clinical competence, 32*t*; SCT (Script Concordance Test), 161–165; SOI (Structured Oral Interview), 162–165; Tailored Design Method, 206
Association of Faculties of Medicine of Canada, 249
Association for Hospital Medical Education, 77
Asthma: NC IPIP quality-of-care measures for, 110*t*; PA Chronic Care Initiative and improved practice for, 116*t*
Attitudinal commitment to change, 173
Australia: Australian Medical Council, 208; physician problem survey participation by, 26–36; physician understanding of clinical trial data by, 221
Award for Excellence in Research (2009), 77

Behavior change theory, 173
Behavioral observation scales (BOS), 217
Behaviorally anchored ratings scales (BARS), 217
Biomedical Institutional Review Board, 107
Book reviews: *Medical Quality Management: Theory and Practice* (Varkey), 151; *Empathy in Patient Care: Antecedents, Development, Measurement, and Outcomes* (Hojat), 205; *Evaluation Theory, Models, & Applications* (Stufflebeam and Shinkfield), 74; *Internet, Mail, and Mixed-Mode Surveys* (Dillman, Smyth, and Christian), 206; *Writing for Educators: Personal Essays and Practical Advice* (Bromley), 261–262
Breakthrough Series (BTS), 190, 191, 192
Breakthrough Series Learning Collaborative model, 100

Cambodia, 145
Canada: Canadian National Physician Survey (2007) in, 81; clinical competence study conducted in, 19–24; international medical curriculum in, 37–43; learning portfolio models in health regulatory colleges of, 57–64; physician performance problem assessment/remediation in the, 26–36; physician understanding of clinical trial data in, 222; Regulated Health Professions Act of 1991 (RHPA), 58; RLF (reflective learning framework) for physicians of, 78–88; SCT to detect poor performing physicians, 161–165; shared decision making (SMD) study in, 45–49
Canadian Institutes of Health Research (CIHR), 70
Canadian Medical Association (CMA), 80, 249
Canadian Medical Association e-Panel, 247
Canadian Medical Protective Association, 249
Canadian National Physician Survey (2007), 81
Canadian Stroke Network, 169
Cease Smoking Today (CS2day) Toolkit, 149–150
Center for Personalized Education for Physicians (CPEP) [U.S.], 161, 181–186
Center for Reproductive Health Research and Policy (UCSF), 145
Centre for Learning in Practice (Ottawa), 77
Change: assessing barriers to CME influenced practice, 237–244; attitudinal commitment to, 173; behavior change theory on, 173; TPB (theory of planned behavior) for, 173–177; Transtheoretical Stages of Change model on, 238
Chronic Care Model, 114–115, 193, 214
Chronic Disease Electronic Management System (CDEMS), 107, 108
Cincinnati Children's Hospital Medical Center, 191
CIPP (context, input, process, product) model of evaluation, 216
Clinical competence: aging and cognitive performance, 153–159; assessment/remediation for performance problems of, 26–36; CME to improve rational prescribing, 11–17; concerns about physician reentry and, 180–181; construct validity study of, 19–24; CPEP Reentry Program to ensure, 181–186; instruments for assessing, 20, 32*t*, 161–165; Knowledge To Action (KTA) Process model to improve, 66, 68–70*fig*, 167–170; North Carolina IPIP (Improving Performance in Practice) for, 107–112; surgical skills mentorship program to improve, 51–55. *See also* Physicians; Teamwork competencies
Clinical competence assessment instruments: clinical evaluation exercises (CEX and mini-CEX), 20; ITERs (in-training evaluation reports), 20; PAR (Physician Achievement Review), 20; programs and methods listed, 32*t*; SCT (Script Concordance Test), 161–165; SOI (Structured Oral Interview), 162–165
Clinical competence study: discussion of main findings of, 23–24; lessons for practice from, 24; MTMM matrix used during, 20, 21–22*fig*, 23, 24; results of the, 21–22*t*; traditional assessment of clinical competence, 19–20; WAAIP project designed to assess competence, 20–21
Clinical data interpretation (CDI), 162
Clinical evaluation exercises (CEX and mini-CEX), 20
Clinical practice: assessing barriers to changes due to CME, 237–244; characteristics/clinical abilities when reentering, 180–186; depression management of diabetic patients in, 172–177; EBP (evidence-based practice), 45, 132–138, 167, 170; exploring empathy as part of, 205; physician reentry study, 89–94; rational prescribing, 12–17. *See also* Health care; Physicians
Clinical reasoning process (CRP): assessment as worldwide concern, 161–162; mean rating from SOI reports, 163*fig*; SCT (Script Concordance Test) to assess, 162–165; SOI

© 2010 The Alliance for Continuing Medical Education, the Society for Academic Continuing Medical Education, and the Council on Continuing Medical Education, Association for Hospital Medical Education.

(Structured Oral Interview) to assess, 162–165
Clinical trials: discussion of CME presentation of, 224–226; examining CME presentation of, 222–227; learners' preferences about presentation of data, 224*fig*; physician understanding of data from, 221–222; *Statistical Comprehension Questionnaire* on, 222, 226–227; understanding of relative and absolute terms of, 221–222, 223
Closed-loop communication, 212*t*, 213
Cochrane Library, 137
Cognitive performance: aging and information professing theory on, 155–157; implications and future research on aging and, 157–159; lessons for practice, 159; plasticity and, 156; situated cognition theory on, 154*fig*–155; team competencies for, 213
Cognitive Task Extracted (CTE): reflective learning process distribution of, 84*t*; RLF qualitative multiple-case study on, 82–85
"The Collaborative Grant Development Process" (Alden), 261
Collège des médecins du Québec (CMQ), 162
College of Family Physicians of Canada, 80, 249
College of Nurses of Ontario (CNO) [Canada], 59
College of physicians and Surgeons of Alberta, 39
College of physicians and Surgeons of Ontario (CPSO), 27
Colorado Permanente Medical Group (CPMG), 238
Communities of practice (CoP): description of, 126–127; electronic, 139–142; as health care evolving concept, 139–140; IPE (interprofessional education) implementation by, 127–131
Community Care of North Carolina (CCNC), 107
Conflict management, 212*t*, 213
CONSORT-adapted statement for CME, 48
Consumer-oriented evaluation, 74
Context/Input/Process/Product Model, 74
Continuing medical education (CME): assessment of barriers to changing practice following, 237–244; defining quality criteria using Modified Nominal Group Technique, 246–249; examining if shared decision making is fostered by, 44–49; expanding the repertoire for evaluating, 74; improving rational prescribing by outcome-based, 11–17; Indian Supercourse in Epidemiology, 260; integrating reflective learning into, 78–88; IPE (interprofessional education), 126–131; IPIP (Improving Performance in Practice) approach to, 106–112; Michigan Improving Performance in Practice (IPIP) program, 95–105; mixed methods study on presentation of evidence in, 221–227; new Singapore requirements for, 145; online computer-based, 3–9, 246–249; PCCMoW (Pharmaceutical Cold Chain Management on Wheels) approach to, 229–235; Pennsylvania Primary Care Coalition approach to, 114–124; physician reentry program, 89–94; team training science integrated into, 208–218; on treating depression, 173–177; in the United Arab Emirates, 251–255; in Vietnam, 144–147. *See also* Health care; Learning
Continuing professional development (CPD): CoP (communities of practice) for, 126–131, 139–142; e-learning program for surgical trainees, 257–259; physician reentry programs, 89–94, 181–186; promoting a coordinated vision of effective, 1–2; structured over course of physician's career, 159; in the United Arab Emirates, 251–255. *See also* Interprofessional education (IPE)
COPD (chronic obstructive pulmonary disease): "Making the Right Diagnosis:" initiative on, 72; methodology and results of initiative for, 73–74
COPD Foundation, 72
Corticosteroids: Iranian CME study on prescriptions of, 13–17; outcomes and assessment indicators for prescribing, 13*t*; prescription-related outcome indicators for prescribed, 15*t*
CPEP Reentry Program: description of, 181; discussion of results on, 184–185; lessons for practice from, 186; licensure status of participants, 184*t*; methods used to study, 181–182; rating on assessment by participant age, 184*t*; results of study on, 182–184
CPMG Department of Education, 238
Crew resource management (CRM), 213
Cue-strategy associations, 213

Dalhousie University Research Ethics Board, 127
Decision making. *See* Shared decision making (SDM)
Deliberate practice (expertise), 156
Depression: PAMD (Pediatricians Attitudes regarding Maternal Depression), 173; understanding rates in persons with diabetes, 172
Depression management: barriers to patient, 174; baseline patient depression care, 175; CE (continuing education) programs impact on, 173, 174–177; intention to change practices of, 174; lessons for practice on, 177; physician attitudes regarding, 174; practices for, 174; self-efficacy regarding ability for patient, 174; TPB (theory of planned behavior) used for, 172–177
Diabetes: addressing depression as part of care for, 173–177; estimated rates of depression related to, 173; NC IPIP quality-of-care measures for, 110*t*; PA Chronic Care Initiative and improved practice for, 116*t*
Diffusion of innovation theory, 67
Dubai Healthcare Provision Report, 251

E-learning: description and effectiveness of, 257–258; for surgical trainees to prevent surgical infection, 258–259. *See also* Online CME (continuing medical education)
Egyptian IMGs (international medical graduates), 37
Electronic communities of practice (CoP): guidelines to enable a successful, 141; importance to CME by, 139; lessons for practice from, 142; TEAD (technology-enabled academic detailing) approach to, 140–141*t*; theoretical advantage of the, 140
Electronic health records (EHRs): increasing use of, 153; initiatives driving development of national, 151; NC IPIP use of, 108, 110
Emergency medicine crisis resource management (EMCRM), 214
Emirates Medical Association, 252
*Empathy in Patient Care: Antecedents, Development, Measurement, and Outcomes* (Hojat), 205
European General Medical Council, 208
Evaluation: CIPP (context, input, process, product) model of, 216; clinical evaluation exercises (CEX and mini-CEX), 20; expanding CME, 74; Kirkpatrick model for teamwork, 216; NC Improving Performance in Practice (IPIP) strategy for, 109; PCCMoW approach to CME, 230; surgical mentorship program, 52*t*. *See also* Assessment
*Evaluation Theory, Models, & Applications* (Stufflebeam and Shinkfield), 74
Evidence-based practice (EBP): characteristics of regional hospitals using, 132; description of, 132; influences for successful adoption of, 167, 170; patient's participation in decision making for, 45; study on physician and nurse use of, 133–138
Evidence-based practice (EBP) study: discussion of physician and nurse use during, 135–138; lessons for practice from, 137; methods to collect data for, 133–134; results of physician and nurse EBP use during, 134*t*–135*t*
Experiential learning: PCCMoW course approach to, 230–235; two different categories of, 230
Expertise (deliberate practice), 156

Family Medicine, 106
Family Medicine Appointment Request A3 (IPIP program), 99*fig*
Family physicians. *See* Physicians
FMEA (Failure Modes and Effects Analysis), 99
"From Idea to Printed Page" (Tallerico), 261

Gender differences of physicians, 81–82*fig*
Global Health Network (GHNet), 260
Global Learning Opportunities for Vaccine Quality (WHO), 230
GP (general practitioners). *See* Physicians
Guided error training (GET), 214–215

Hai Phong Medical University (Vietnam), 146
Health Canada, 127–131
Health care: changing environment of Vietnam, 144–145; evidence-based practice in Taiwan hospitals, 132–138; IPIP (Michigan Improving Performance in Practice) program to improve, 95–105; *Medical Quality Management: Theory and Practice* on improving, 151; Patient-Centered Medical Home (PCMH), 112; TQM (Total Quality Management) approach used by, 95–196. *See also* Clinical practice; Continuing medical education (CME)
Health Professional Regulatory Advisory Council (HPRAC) [Canada], 58
Health regulatory colleges (Canada): description and function of, 57–58; examining how learning portfolios are used in, 58–64; listed, 58*t*
Heart and Stroke Foundation of Canada/Ontario, 169
Hospitals: comparing EBP between physicians and nurses in, 133–138; EBP (evidence-based practice) used in regional, 132
Hue College of Medicine and Pharmacy (Vietnam), 147

Improving Performance in Practice (IPIP): description of, 187–188; design requirements for, 190*t*; designing as large-scale system, 188–195; flowchart for development and testing concept of, 189*fig*; launching and goal of, 106–107; lessons for practice from the, 195; national program components of, 194*fig*; North Carolina IPIP, 107–112; Pennsylvania Primary Care Coalition membership in, 114–124; spread of the, 193–194; system diagram of, 193*fig*
Indian IMGs (international medical graduates), 37
Indian Supercourse in Epidemiology, 260
Industry influence study: description of, 198; discussion of, 202–203; methods used during, 198–199; participant comments about, 199–202; results of, 199
InfoPOEMs: description of, 80; RLF (reflective learning framework) use of, 80–81, 86
Information Assessment Method (IAM), 80–81
Information processing theory, 155–157
Innovations: Cease Smoking Today (CS2day) Toolkit, 149–150; improving COPD diagnosis and management, 72–73; Indian Supercourse in Epidemiology, 260
Institute of Medicine (IOM) [U.S.], 1–2, 197
Integrated Health and Learning Project (Canada), 43
Internal Medicine and Pediatrics, 106
International medical graduates (IMGs): changing demographics of, 36; mediating influences on, 41; patient billing, insurance systems, and, 41; privileging system of, 40–41; studies on learning needs of, 36–37; study on hidden curriculum of, 37–43
International medical graduates (IMGs) study: conclusions from the, 41–42; discussion of findings, 42–43; lessons for practice from the, 42; methods used to examine curriculum of, 38–39; results of the, 39–41
International Patient Decision Aid Standards (IPDAS) Collaboration, 46
International Physicians Assessment Coalition (IPAC): description of, 28; physician problem survey by the, 28–36
Internet CME. *See* E-learning; Online CME (continuing medical education)
*Internet, Mail, and Mixed-Mode Surveys* (Dillman, Smyth, and Christian), 206
Interprofessional Education for Collaborative Patient-Centered Practice, 127
Interprofessional education (IPE): description of, 126–127; IPFS (Interprofessional Facilitation Scale) for, 127–131; lessons for practice from, 131. *See also* Continuing professional development (CPD)
Interprofessional Facilitation Scale (IPFS): discussion and conclusions regarding the, 130–131; methods used to develop, 127–128; phases one and two development of, 127*e*–128*e*; psychometric testing of the, 128*e*–129; rotated factor loadings, mean score, and standard deviations of, 129*t*
Iran: adoption of CME in, 11–12; randomized trial to examine CME on rational prescribing in, 11–17
Ireland: IMGs (international medical graduates) recruited from, 37; physician problem survey participation by, 26–36
ITERs (in-training evaluation reports), 20

JCEHP Award for Excellence in Research, 77
JCEHP.com, 207
*Journal of Continuing Education in the Health Professions*: Award for Excellence in Research (2009) by, 77; editorial leadership change, 207
JSPE (Jefferson Scale of Physician Empathy), 205

Kaiser Permanente Colorado CME study: attendance, evaluation return, and barrier statements in, 239*t*; CME learning transfer barrier categories in, 240*t*–241*t*; discussion of barriers to change following, 239, 242–243; frequency of reported barriers to change after, 239*fig*; implications for future practice, 243; learning transfer barrier framework during, 242*fig*; lessons for practice from, 243; limitations uncovered during, 243; questions for future research, 243–244; subcategorization of "provider" barriers, 241*fig*
Kaiser Permanente Colorado (KPCO): background of, 238; examining barriers to change after CME in, 238–244
Kirkpatrick model of evaluation, 216
Knowledge To Action (KTA) Process model: illustrated diagrams of, 70*fig*, 168*fig*; inciting clinical change through, 167–170; study on effectiveness of, 66, 68–70; successful adoption of evidence-based practice using, 167, 170; USN (unilateral spatial neglect), 168–170
Knowledge translation (KT): conditions for effective, 65; defining, 66; KTA (Knowledge To Action) Process framework for, 66, 68–70*fig*, 167–170; lessons for practice from, 70; OMRU (Ottawa model of research use) originally selected for, 66, 68–70; PAR (participatory action research) to facilitate, 65, 66, 68; PCCMoW (Pharmaceutical Cold Chain Management on Wheels) course for, 229–235*t*; PERFECT tool for successful, 170. *See also* Learning
Knowledge translation study: background of, 66; on characteristics of adopters, 67; conceptual framework for knowledge translation, 67–68; defining knowledge translation, 66–67; on diffusion of innovation theory, 67; on health issues concerning youth, 68; KTA conceptual framework, 70*fig*; on OMRU and KTA, 68–70; PAR methods used during, 68; on parents versus youth perceptions of community strengths, 69*fig*; on theoretical and conceptual framework, 67
Kolb's learning cycle, 230*fig*, 235
Korea, 145

Laos, 145
Laparoscopic colon resection (LAP): discussion of findings on mentoring of, 54–55; lessons for practice of, 55; methods used to examine mentoring of, 52–54; surgical mentorship program to improve, 51
Learning: CoP (communities of practice) for, 126–131, 139–142; IPE (interprofessional education) interactive, 126–131; Kolb's learning cycle on, 230*fig*, 235; learning portfolio models study on assessment and, 60, 62; pharmaceutical cold chain management for experiential, 229–235; reflective, 78–88; Vygotsky's social learning theory on ZPD for, 230, 233. *See also* Continuing medical education (CME); Knowledge translation (KT)
Learning portfolio models: health regulatory colleges use of, 57–64; implementing effective use of, 59; literature review on, 58–59
Learning portfolio models study: components of the completion process, 60*fig*; discussion of results, 62–63; lessons for practice from the, 63; limitations of the, 63; methodology used during, 59; results of, 59–62; on sequence of events in portfolio completion, 61*t*; summary of available program support, 62*t*

Maintenance of certification (MOC) program: American Board of Medical Specialties (ABMS), 187, 188, 191; benefits of research on aging and, 159; Maintenance of Certification Part IV (MOC IV), 107, 108, 112
"Making the Right Diagnosis: The Need for Spirometry" initiative, 72–73
MAXQDA (software), 82
*M"bius* (journal), 207
Medical Council of Canada (MCC), 209
Medical Council of New Zealand, 27
"Medical home" concept, 214
*Medical Quality Management: Theory and Practice* (Varkey), 151
*Medical Times* survey, 252
MEDLINE, 207

Mentorship programs. *See* Surgical mentorship programs
Michigan Improving Performance in Practice (IPIP) measures: current state/future state of, 101*fig*; December 2009 Measures Report, 100*fig*; family medicine residency clinic diabetic measure improvement, 102*fig*; improvement in clinical measures in IPIP patients, 104*fig*; process improvements, 103*fig*
Michigan Improving Performance in Practice (IPIP) program: discussion of results of, 104–105; Family Medicine Appointment Request A3 used in, 99*fig*; funders and contributors to, 95–96*t*; lessons for practice from the, 105; overview, objectives, and desired outcomes of the, 95–96; quality-improvement coach training topics in the, 96*t*; quality-improvement methodologies terminology used in the, 97*t*; requirements of practice for, 96–100; results of process-improvement activities of the, 100–104; standardized workflow for the quality improvement coach in, 98*fig*
Mission analysis, 212*t*, 213
Modified Nominal Group Technique: defining quality criteria for online CME using, 247–249; description of, 247
Modified Nominal Group Technique project: discussion of results, 249; lessons for practice from the, 249; methods used during, 247; quality criteria presented for ranking during, 248*t*; results of the, 247–249
MTMM (multitrait multimethod) matrix: analysis of variance for, 23*t*; Campbell and Fiske technique used to construct, 21–22*fig*; clinical competence findings using the, 23–24; construct validity study of clinical competence using, 21–24; design basics of, 20
Mutual performance monitoring, 212*t*, 213

National Board of Medical Examiners, 77

National Clinical Assessment Service (NCAS) [UK], 27, 28, 35
National Committee for Quality Assurance (NCQA), 116
National Health Research Institutes (NHRI), 133
National Institutes of Health, 221
National Library of Medicine (NLM), 207
National Patient Safety Agency (UK), 35
National Quality Forum (NCQA), 192
NC Division of Public Health, 107
NC Improving Performance in Practice (IPIP): discussion of impact, 111–112; evaluation strategy and framework of, 109; lessons for practice from the, 112; long-term sustainability of, 111*fig*; map of area covered by, 108*fig*; North Carolina coalition and initial funding of, 107; quality-of-care measures for diabetes and asthma during wave one, 110*t*; target population and spread strategy of, 107–109; wave one of, 109*t*–110*t*, 111*fig*; wave two design and spread, 110*t*–111
NC IPIP Steering Committee, 107
NC Medicaid, 107
NCAFP Foundation, 107
Neurobiology, 156–157
New Zealand: IMGs (international medical graduates) recruited from, 38; physician problem survey participation by, 26–36
Newfoundland, 38
North Carolina Academy of Family Physicians (NCAFP), 107
North Carolina Area Health Education Centers (NC AHEC) program, 107
North Carolina Chapter of the American College of Physicians, 107
North Carolina Medical Society, 107
North Carolina Pediatric Society, 107
Northern New England Cardiovascular Study Group, 191
NSAIDs (nonsteroidal anti-inflammatory drugs): Iranian CME study on prescriptions of, 13–17; outcomes and assessment indicators for prescribing, 13*t*; prescription-related outcome indicators for prescribed, 15*t*
Nurse EBP study (Taiwan): comparison between physicians and, 134–136*t*; demographics of respondents in, 134*t*; demographics of Taiwan work force, 133*t*
Nurses: demographics of Taiwan, 133*t*; evidence-based practice by physicians compared to, 132–138. *See also* Physicians

Online CME (continuing medical education): characteristics of 272 Web sites for, 8*t*; CME Web site survey on, 4–5, 6–7; current state of, 5–6; data sources and their limitation on, 3–5; description of, 3; discussion of findings on, 7–9; lessons for practice from, 9; market share trends of, 5*t*, 6*t*, 7*fig*; Modified Nominal Group Technique for defining quality criteria for, 246–249. *See also* E-learning
Online CME Web site survey: description and purpose of, 4–5; results of the, 6–7
Oregon Health & Science University (OHSU): physician reentry program of, 90; study and findings on reentry program of, 90–94
Oregon Medical Board, 90
Ottawa model of research use (OMRU), 66, 68–70

PA Chronic Care Initiative: average practice performance measures during the, 119*fig*; discussion on results of the, 120, 124; lessons for practice from the, 124; map of Pennsylvania impacted by, 117*fig*; program-level change during, 120; regional financial incentives in, 117*t*; strategic plan and goals of the, 115; strategies used by, 115–116, 118
PA Chronic Care Initiative Collaborative Cumulative Monthly Practice Report, 121*fig*–123*fig*
Pakistan, 37
Participatory action research (PAR), 65, 66, 68
Partners for Interprofessional Cancer Education (PICE) project: description of, 127; IPFS (Interprofessional Facilitation Scale) developed by, 127–131
Patient safety: e-learning program preventing surgical infection for, 257–259; TeamSTEPPS program for, 211, 214; UK National Patient Safety Agency for, 35
Patient-Centered Medical Home (PCMH): NC IPIP and, 112; PA Chronic Care Initiative and, 116
Patients: International Patient Decision Aid Standards (IPDAS) Collaboration, 46; JSPPPE (Jefferson Scale of Patient's Perception of Physician Empathy), 205; managing depression in diabetic, 173–177; SDM (shared decision making) participation by, 45–49
PCCMoW (Pharmaceutical Cold Chain Management on Wheels) course: approach used by, 231; cold chain of the, 229; critical success factors for, 233–235; example of system for, 232*fig*; Kolb's learning cycle used in, 230*fig*, 235; lessons for practice from the, 235; methods used for, 230–231*t*; post-course survey questions and responses on, 235*t*; results of the, 231–233; as solution to problem of developing knowledge and skills, 230; Vygotsky's zone of proximal development (ZPD) and, 230, 233
PDSA (Plan-Do-Study-Act) cycles, 99
Pediatricians Attitudes regarding Maternal Depression (PAMD), 173
PEER program, 31
Pennsylvania Governor's Office of Health Care Reform, 118, 119
Pennsylvania Primary Care Coalition: lessons for practice from the, 124; organizations part of the, 114–115; PA Chronic Care Initiative of, 115–124
PERFECT tool, 170
Performance assessment: approach listed for, 35*t*; assessment programs and providers for, 29*t*–30*t*; collection of information about contributory factors, 31*t*; focus and methods of, 31–32; identifying factors for potential remediability, 27–28; lessons for practice from, 35; methods of, 32*t*; study on process of, 28–35; variety of reasons for, 26–27. *See also* Remediation programs
Performance assessment study: discussion of findings, 34–35; lessons for practice from, 35; methods used for, 28; on remediation programs, 32–34; results of the, 28, 31*t*–32
Performance problems: aging and cognitive, 153–159; assessment of, 26–35; Script Concordance Tests (SCT) to assess, 161–165
PharmedOut *Why Lunch Matters*: description of, 198; discussion of industry influence, 202–203; methods to study industry influence, 198–199; participant comments about industry influence, 199–202; results of industry influence, 199
Physician Achievement Review (PAR), 20
Physician Assessment and Clinical Education (PACE) [University of California], 162
Physician EBP study (Taiwan): comparison between nurses and, 134–136*t*; demographics of respondents in, 134*t*; demographics of Taiwan work force, 133*t*
Physician reentry: AMA Council on Medical Education report on, 181; annual return rates in the U.S., 180; CPEP Reentry Program to ensure clinical abilities of, 180–186; lessons for practice on, 94, 186; state concerns about competence of, 180–181; study on, 90–94
Physician reentry programs: CPEP Reentry Program, 181–186; recommendations for, 89–90; study on education intervention of, 90–94
Physician reentry study: on characteristics of applicants to reentry program, 92*t*; on demographics of reentry program participants, 92*t*; lessons for practice from the, 94; methods used during, 90–91; on reasons and number of applicants not accepted, 93*t*; results of, 91–93
Physicians: AMA's Code of Physician Conduct, 209; assessing perceptions about industry relationships by, 197–203; demographics of Taiwan, 133*t*; efforts to stimulate reentry by, 90–94; evidence-based practice by nurses compared to, 132–138; examining shared decision making fostered by CME, 44–49; exploring empathy of, 205; IPIP (Michigan Improving Performance in Practice) for, 95–105; Maintenance of Certification Part IV (MOC IV) for U.S., 107, 108, 112; managing depression in diabetic patients, 172–177; national reports on shortage of U.S., 89; as RLF qualitative multiple-case study participants, 80–88; understanding of clinical trials data by, 221–222; Vietnam's LET (Law on Examination and Treatment) on, 146. *See also* Clinical competence; Clinical practice; Nurses
Plasticity, 156
Prescribing. *See* Rational prescribing CME study
Professionalism theory, 127

Quality-improvement consultants (QICs): North Carolina IPIP use of, 107–108; PA Chronic Care Initiative use of, 116

Rational prescribing CME study: characteristics of GP's eligible for programs, 15*t*; drug-related outcome indicators during, 16*t*; lessons for practice from, 17; methods used for, 12–13; outcomes and assessment indicators used during, 13*t*; participation flowchart for, 14*fig*; prescription-related outcome indicators during, 15*t*
Reflection Questionnaire, 78
Reflection-in-Learning scale, 78–79
Reflective learning: definition of, 78–79; RLF (reflective learning framework) for, 78–88
Reflective learning framework (RLF): five processes of, 79; initial version of the, 80*e*; lessons for practice from, 87; methods for building the, 79; pilot study for validating, 79–80; pilot version of the, 81*e*; potential use of, 86; qualitative multiple-case study

for validating, 80–886; refined codebook for, 85*e*; research questions to ask for building, 78
Regulated Health Professions Act of 1991 (RHPA) [Canada], 58
Remediation programs: aims and processes of, 34; discussion of findings on, 34–35; general features of, 32–34. *See also* Performance assessment
Research data: discussion of CME presentation of, 224–226; examining CME presentation of, 222–227; learners' preferences about presentation of, 224*fig*; physician understanding of, 221–222; *Statistical Comprehension Questionnaire* on understanding of, 222, 226–227; understanding of relative and absolute terms of, 221–222, 223
Responsive evaluation, 74
"Rethink, Rewrite, Revise: Mining the Gold" (Sheridan-Thomas), 261
Robert Wood Johnson Foundation, 95, 107, 193
Royal College of Physicians and Surgeons of Canada, 249

Script Concordance Test (SCT): description of, 162; discussion on results of, 163–164; lessons for practice from study on, 165; methods used to evaluate effectiveness of, 162–163; results on effectiveness of, 163
Self-directed learning, 157
Self-regulated learning, 157
Sentinel lymph node biopsy for breast cancer (SLNB): discussion of findings on mentoring of, 54–55; lessons for practice of, 55; methods used to examine mentoring of, 52–54; surgical mentorship program to improve, 51
Shared decision making (SMD): description of, 45; student of CME fostering of, 45–49
Shared decision making (SMD) study: authors' contributions to, 48–49; discussion of findings, 47–48; lessons for practice from the, 49; methods used during, 45*t*–46*t*; objective of the, 45; results of the, 46–47*fig*
Singapore, 145
Situated cognition theory, 154*fig*–155
"Six Reasons to Write for Publication" (Carpenter), 261
Social identity theory, 127
South Africa: IMGs (international medical graduates) recruited from, 37; physician problem survey participation by, 26–36
SPSS (software), 133
*Statistical Comprehension Questionnaire*, 222, 226–227
Stroke rehabilitation, 168–170
Structured Oral Interview (SOI), 162–165
Surgical e-learning programs: effectiveness of, 257–258; preventing surgical infection through, 258–259
Surgical mentorship programs: comparison of design, outcomes, and mediators of, 53*t*; conceptual framework for evaluating, 52*t*; LAP, SLNB, and TME, 50–55; required to improve skills, 51

Tailored Design Method, 206
Taiwan: evidence-based practice survey of hospitals in, 132–138; physician/nursing work force demographics in, 133*t*
TEAD (technology-enabled academic detailing), 140–141*t*
Team adaptation, 213
Team coordination and adaptation training (TCT), 213
Team self-correction training, 214
Team training: examples of relevant instructional strategies for, 215*t*; integrating into CE (continuing education), 217; lessons for practice on, 218; methods for, 215–216; strategies for teaching, 213–215*t*
TeamSTEPPS program, 211, 214
Teamwork competencies: ABCs of, 211–213, 216; continuing education to address, 208–209; generic versus specific, 211; lessons for practice for developing, 218; measuring and assessing, 216–217; methods and strategies for teaching, 213–216; taskwork versus teamwork, 210; team processes of, 210; why continuing education is vital mechanism for, 209–210. *See also* Clinical competence
Theory of planned behavior (TPB), 172–177
Total mesorectal excision (TME): discussion of findings on mentoring of, 54–55; lessons for practice of, 55; methods used to examine mentoring of, 52–54; surgical mentorship program to improve, 51
Transtheoretical Stages of Change model, 238

Unilateral spatial neglect (USN), 168–170
United Arab Emirates CME study: background information on, 251–253; lessons for practice from the, 255; reliability statistics from the, 254*t*; research methodology used during, 253; respondents' profile from the, 253*t*; responses according to educational level, 255*t*; responses according to organization size, 254*t*; responses according to type of post held, 255*t*; results and discussion of, 254–255
United Arab Emirates (UAE): CME study in the, 251–255; population of the, 252*t*
United Kingdom (UK): IMGs (international medical graduates) recruited from, 37; National Clinical Assessment Service (NCAS), 27, 28, 35; National Patient Safety Agency of, 35; physician problem survey participation by, 26–36; physician understanding of clinical trial data in, 221
United States: ACGME-accredited residency programs in the, 91; aging population of the, 153; Michigan Improving Performance in Practice (IPIP) program in the, 95–105; North Carolina IPIP (Improving Performance in Practice), 107–112; Pennsylvania Primary Care Coalition in the, 114–124; physician performance problem assessment/remediation in the, 26–36; physician reentry programs in the, 89–94
University of Alberta, 39
University of Calgary, 39
University of California, San Francisco (UCSF), 145, 146
University of Medicine and Dentistry (New Jersey), 77
University of North Carolina, 107
University of Pittsburgh, 260
University of Prince Edward Island, 70
University of Wisconsin, 161
Utilization-focused evaluation, 74

Vietnam: allopathic healthwork force distribution in, 147*t*; current preservice training capacity in, 145; description of medical school curricula in, 146; lessons for practice from, 147; LET (Law on Examination and Treatment) of, 146; medical education innovation in, 145; new CME legislation in, 145–147; rapidly changing environment of health care in, 144–145
Vygotsky's social learning theory, 230, 233

Western Alliance for Assessment of International Physicians (WAAIP) project: construct validity study of clinical competence by, 20–24; origins and objectives of the, 20
"What? Me Write?" (Carpenter), 261
*Why Lunch Matters* (PharmedOut presentation): description of, 198; discussion of industry influence, 202–203; methods to study industry influence, 198–199; participant comments about industry influence, 199–202; results of industry influence, 199
World Health Organization: Collaborating Center at University of Pittsburgh, 260; Global Learning Opportunities for Vaccine Quality, 230
*Writing for Educators: Personal Essays and Practical Advice* (Bromley), 261–262

Zone of proximal development (ZPD), 230, 233
